Name CYP2D6
Definition Human cytochrome P450 IID6 (CYP2D6) gene
Function Metabolic enzyme
Organism Homo Sapiens
Length 9432
No Features 13
Population Size 46
No. Haplotypes 10
Nucleotide Polymorphism (theta) 5.6E-4 +/- 3.1E-4
Nucleotide Diversity (pi) 2.8E-4 +/- 1.8E-4

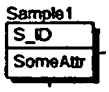
FIG. 25E

Legend of Figures:



Rectangle Boxes: Tables in the database.

Rounded Boxes: Children tables that depend on their parent tables. This dependency requires that a parent record to be in existence before a child record can be created.

2: 
Identifying parent / child relationship. It depicts the not nullable 1-to-0-or-many relationship.

4: 
Non-identifying parent / child relationship. It represents the nullable 0-or-1-to-many relationship.

6: 

Identifying parent / child relationship. It depicts the not nullable 1-to-1-or-many relationship.

8: 
Non-identifying parent / child relationship. It represents the not nullable 1-to-1-or-many relationship.

10: 

Identifying parent / child relationship. It depicts the not nullable 1-to-exact-1 relationship.

12: 
Non-identifying parent / child relationship. It represents the nullable 0-or-1-to-exact-1 relationship.

14: 
Non-identifying parent / child relationship. It represents the not nullable 0-or-1-to-many relationship.

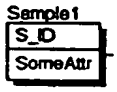
FIG. 44E

Legend of Figures:



Rectangle Boxes: Tables in the database.

Rounded Boxes: Children tables that depend on their parent tables. This dependency requires that a parent record to be in existence before a child record can be created.

2:  Identifying parent / child relationship. It depicts the not nullable 1-to-0-or-many relationship.

4:  Non-identifying parent / child relationship. It represents the nullable 0-or-1-to-many relationship.

6:  Identifying parent / child relationship. It depicts the not nullable 1-to-1-or-many relationship.

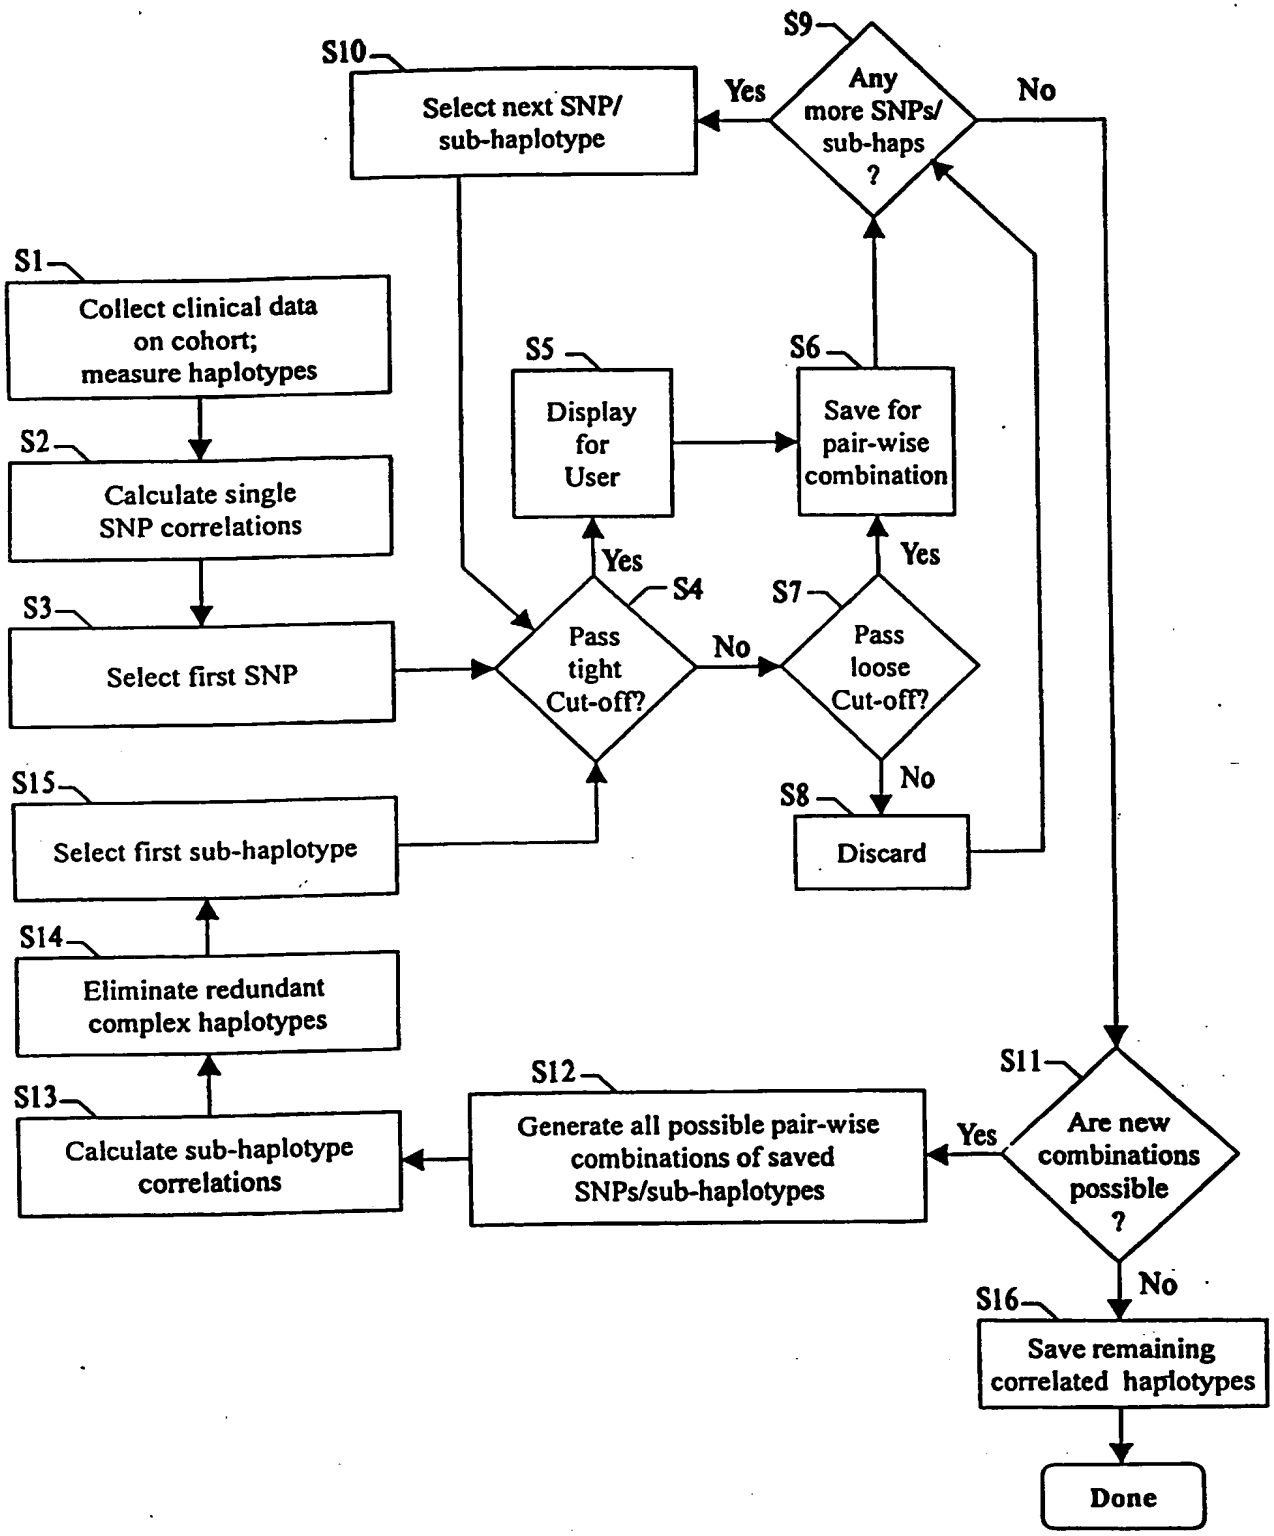
8:  Non-identifying parent / child relationship. It represents the not nullable 1-to-1-or-many relationship.

10:  Identifying parent / child relationship. It depicts the not nullable 1-to-exact-1 relationship.

12:  Non-identifying parent / child relationship. It represents the nullable 0-or-1-to-exact-1 relationship.

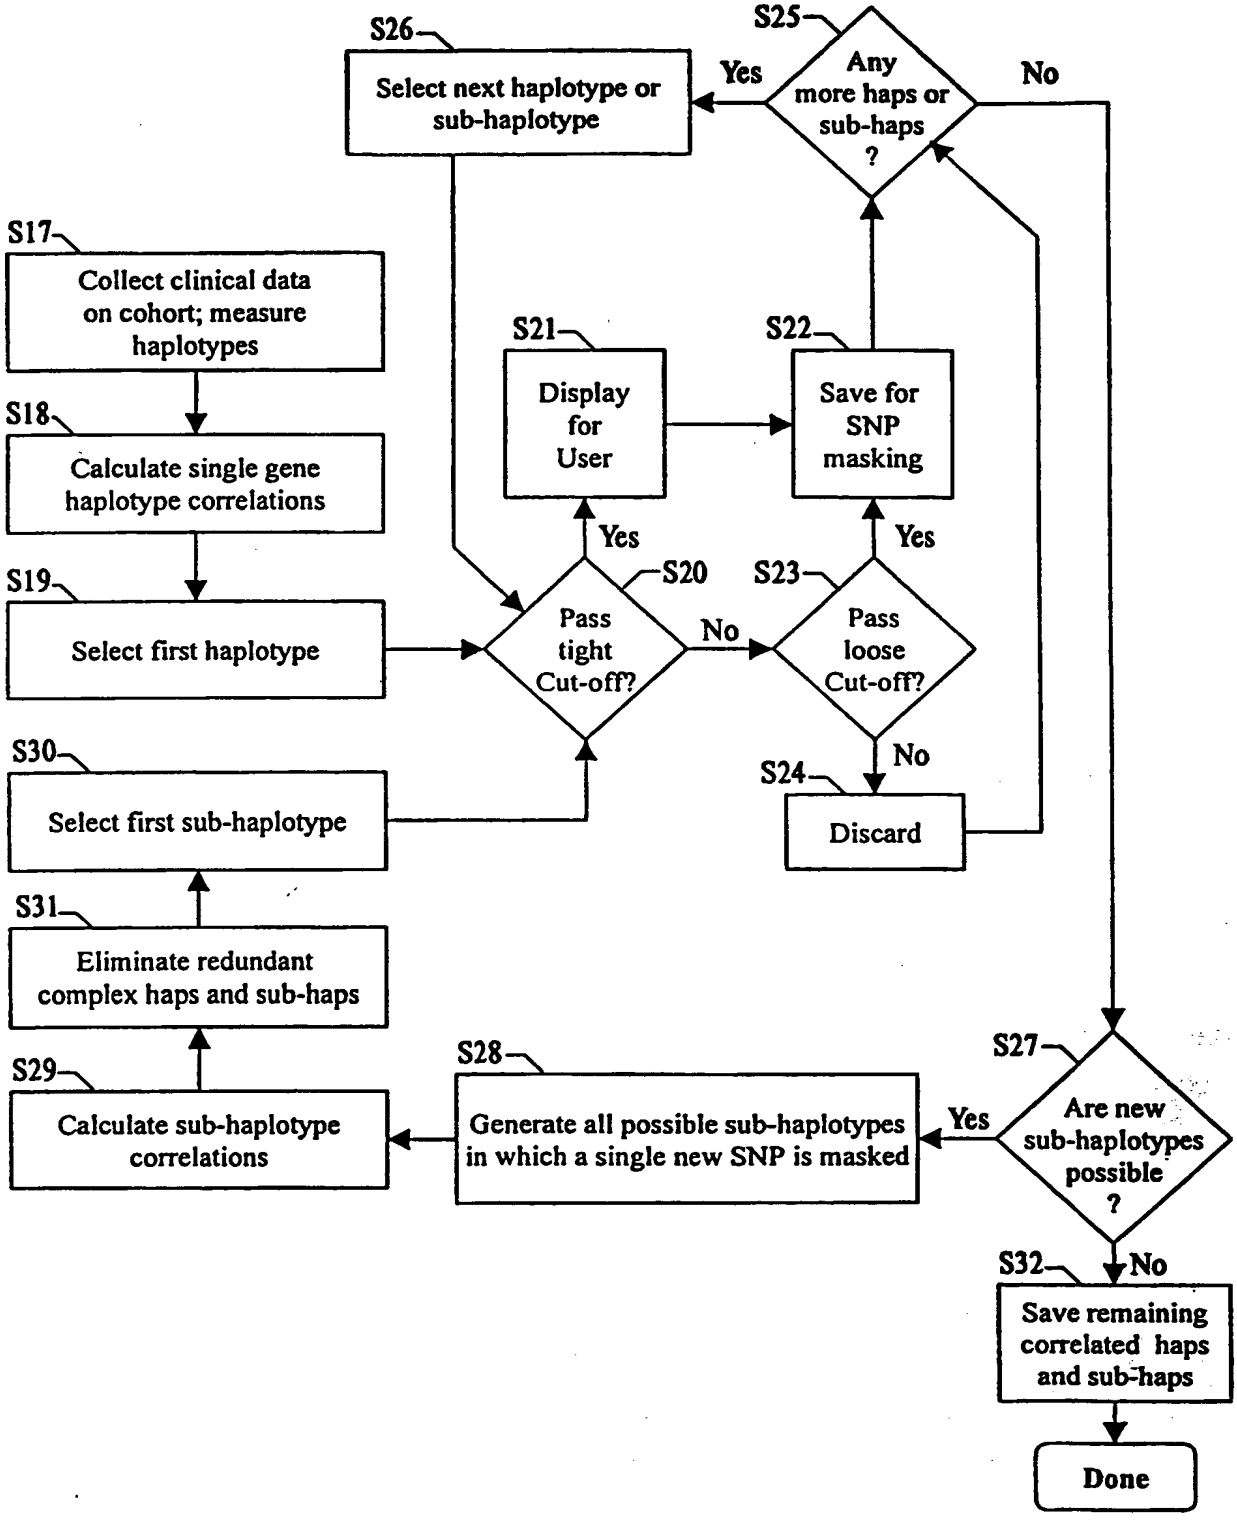
14:  Non-identifying parent / child relationship. It represents the not nullable 0-or-1-to-many relationship.

FIG. 44F



S1
Collect clinical data on cohort; measure haplotypes
S2
Calculate single SNP correlations
S3
Select first SNP
S4
Pass tight Cut-off?
Yes
No
S5
Display for User
S6
Save for pair-wise combination
S7
Pass loose Cut-off?
Yes
No
S8
Discard
S9
Any more SNPs/ sub-haps ?
Yes
No
S10
Select next SNP/ sub-haplotype
S11
Are new combinations possible ?
Yes
No
S12
Generate all possible pair-wise combinations of saved SNPs/sub-haplotypes
S13
Calculate sub-haplotype correlations
S14
Eliminate redundant complex haplotypes
S15
Select first sub-haplotype
S16
Save remaining correlated haplotypes
Done

FIG. 45



S17
Collect clinical data on cohort; measure haplotypes
S18
Calculate single gene haplotype correlations
S19
Select first haplotype
S30
Select first sub-haplotype
S31
Eliminate redundant complex haps and sub-haps
S29
Calculate sub-haplotype correlations
S28
Generate all possible sub-haplotypes in which a single new SNP is masked
S27
Are new sub-haplotypes possible ?
Yes
No
S32
Save remaining correlated haps and sub-haps
Done
S20
Pass tight Cut-off?
Yes
No
S21
Display for User
S23
Pass loose Cut-off?
Yes
No
S22
Save for SNP masking
S24
Discard
S25
Any more haps or sub-haps ?
Yes
No
S26
Select next haplotype or sub-haplotype
